TECHNICAL PROJECTS

Y.A.M.S - [Frontend](#) | [Backend](#)

Web app guide users towards the best food based on their location

- Implemented Fusion Yelp API to list the surrounding restaurants near the user
- Utilized the Mapbox API to show where the user is and to target all the restaurant's locations with React
- Constructed a user profile where they can sign-in and look at their go-to-list of restaurants as well as a log-out
- Designed it to be mobile friendly, to improve user interaction

Yap Station - [Frontend](#) | [Backend](#)

Collaborated project. Web app allows users to post status, comments, and photos

- Implemented Carrier Wave to implement photo, posts, and video posts
- Constructed a user profile where they can sign-in and look at their feeds and posts
- Designed the web app with bootstrap and CSS

Car Deets - [Frontend](#) | [Backend](#)

Web app allows users choosing the right car for the individual and taking a closer look at the specifications

- Implemented Vanilla JavaScript to fabricate a simple frontend and to create a more user-friendly app
- Created accurate seed data with Ruby Rails to produce numerous vehicles
- Developed a Ruby backend that has a three model relationship with the user, the car, and comments as the joiner
- Utilized CSS to design the layout of the frontend
